

RAMESH AYYALA

Full Stack Developer (.NET Core | React)

ayyalarameshnaidu@gmail.com • +91 79894 19864 • Hyderabad, India • [linkedin.com/ramesh-naidu-ayyala](https://www.linkedin.com/in/ramesh-naidu-ayyala)

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 3 years of experience building scalable, high-performance web and mobile applications using .NET Core Web API and React/React Native. Proven expertise in end-to-end product delivery — from RESTful API design and database optimization to responsive UI development, cloud deployments on AWS, and containerization with Docker. Adept at Agile/SCRUM environments with a strong focus on code quality, TDD, and CI/CD. Demonstrated success migrating legacy codebases, building AI-powered SaaS products, and delivering business-critical features across healthcare and media domains.

CORE COMPETENCIES

Frontend	React, Typescripts, JavaScript, HTML5, CSS3, Bootstrap, Tailwind CSS, Shadcn
Backend	.NET Core, ASP.NET MVC, Web API, Node.js, Express.js, RESTful APIs
Databases	MSSQL Server, PostgreSQL, MySQL— complex queries, stored procedures
DevOps & Cloud	AWS (EC2, S3, EBS), Docker, NGINX, CI/CD Pipelines, Git
State Management	Recoil, Context API
Other	Entity Framework, JWT Auth, Chart.js, MediaMTX, YOLO, Google Maps API, Postman
Practices	Agile/SCRUM, TDD, Unit Testing, Performance Optimization, Code Review

PROFESSIONAL EXPERIENCE

Digi Telescope Private Limited | Software Engineer | June 2023 – Present

Project 1: CAREis – Care Home Management System

.Net Core, Entity Framework Core, React, typescript, MSSQL, Azure git, AWS

Description: The CAREis system is a comprehensive platform used to manage various functions related to care services, including audits, policy management, training, and reporting. It supports web and mobile applications and ensures seamless integration between different modules. The project focused on providing a reliable and user-friendly experience for care providers and administrators.

Contributions:

- Diagnosed and resolved client-reported issues efficiently, maintaining system reliability and enhancing user satisfaction. Developed EC2 and S3 bucket provisioning forms using Terraform.
- Successfully migrated legacy AngularJS codebase to React with typescript, improving application performance, scalability, and maintainability.
- Worked on seamless integration of various modules, including audits, policy management, training, and reporting, ensuring a unified platform experience for care providers and administrators.
- Collaborated with cross-functional teams to gather requirements, prioritize feature enhancements, and implement solutions tailored to client needs.
- Conducted rigorous testing and debugging to maintain high-quality standards and optimize application performance.
- Documented technical workflows and updates to ensure clarity and consistency across development and support teams.
- Implemented role-based authentication and authorization (RBAC) using JWT, ensuring secure access control across different user roles (admins, care providers, staff) and protecting sensitive healthcare data.
- Optimized API performance and database queries (MSSQL) by refining stored procedures and indexing strategies, reducing response time and improving overall system efficiency under high user load.

Project 2: TITRATE – Imprest Stock Management with Video Analytics

.Net Core, Entity Framework Core, React, Bootstrap5, MSSQL, Azure git, AWS

Description: A SaaS-based video analytics solution for healthcare inventory management. The system automates Imprest stock monitoring using AI to recognize medicine boxes, generates wholesale orders proactively, and alerts staff for timely restocking of critical supplies.

Contributions:

- Developed and maintained ASP.NET core applications with optimized performance and support various modules, including Production, Operator, End User, and Admin.
- Developed and optimized database models and queries using MSSQL, ensuring seamless data flow for tracking production, testing, and shipping records.
- Collaborated with clients to gather requirements and ensure the application met their specific testing and reporting needs.
- Participated in end-to-end testing and deployment of modules, ensuring robust performance and compliance with customer requirements.
- Documented technical details and user workflows, ensuring clear communication across teams and stakeholders.
- Worked closely with cross-functional teams, including QA and operations, to ensure smooth integration and functionality of the application.

Project 3: Video Surveillance System (GAZZEE) – AI-Powered Surveillance Platform

.Net Core Web API, React, Python, FastAPI, YOLO, PostgreSQL/MSSQL, AWS, MediaMTX

Description: A scalable SaaS-based video management platform designed for real-time surveillance, monitoring, and analytics. The system enables users to manage multiple camera feeds, perform AI-based object detection using YOLO, and generate intelligent alerts. It leverages MediaMTX for efficient RTSP/RTMP stream handling and integrates React UI with .NET APIs and Python (FastAPI) microservices for high-performance video processing.

Contributions:

- Developed and maintained ASP.NET core applications with optimized performance and support various modules, including Production, Operator, End User, and Admin.
- Developed responsive and modular React UI for live streaming, playback, alert dashboards, and multi-camera monitoring.
- Built and maintained .NET Core Web APIs for authentication, camera/device management, user roles, and configurations.
- Integrated MediaMTX for handling RTSP/RTMP streams, enabling low-latency live video ingestion and distribution across services.
- Designed and implemented Python FastAPI microservices using YOLO for real-time object detection and event triggering.
- Implemented AI-based alert pipelines (person detection, intrusion alerts, object tracking) with snapshot capture and logging.
- Optimized video streaming pipelines to support multiple concurrent camera feeds with minimal latency and buffering.
- Implemented secure multi-tenant architecture with role-based access control for enterprise SaaS usage.

EDUCATION

Bachelor of Technology – Electrical & Electronics Engineering

JNTUK University, Andhra Pradesh, India

Diploma – Electrical & Electronics Engineering

SBTET, Andhra Pradesh, India
